

5.3 Social Impact of Extension Activities

5.3.1 Cleanliness Drives in Community Areas

As part of their community service initiative, the NSS students of Government College actively participated in a series of meaningful activities from 27-10-2024 to 30-10-2024, demonstrating a strong sense of social responsibility beyond academic pursuits. The programme focused on promoting cleanliness, public health, and compassion within the community. The initiative began with a cleaning drive at the local market area, where students enthusiastically collected waste, swept the surroundings, and assisted in segregating garbage into biodegradable and non-biodegradable categories. Their dedicated efforts significantly improved the cleanliness of the area and created awareness about hygiene and environmental care. The active involvement of the students also inspired shopkeepers and local residents to adopt better sanitation practices and maintain a cleaner environment.

Following the cleaning drive, the students visited the District Hospital, where they interacted warmly with patients, offered emotional support, and distributed fruits to spread cheer and comfort. The students also expressed their gratitude to the healthcare staff, acknowledging their tireless dedication and service to the community. This visit helped students understand the importance of empathy, compassion, and mental and emotional well-being. Overall, these activities provided students with valuable lessons in teamwork, civic responsibility, and social awareness. Such initiatives not only strengthen the bond between youth and the community but also motivate society toward creating a cleaner, healthier, and more caring environment.

5.3.2 Maintenance of Community Water Resources

The college students play a vital role in environmental protection, and one meaningful way they contribute is through the cleaning and maintenance of natural water resources. Such community service activities help remove plastic waste, harmful pollutants, and other debris that pose a threat to local ecosystems. Through these initiatives, students not only enhance the cleanliness

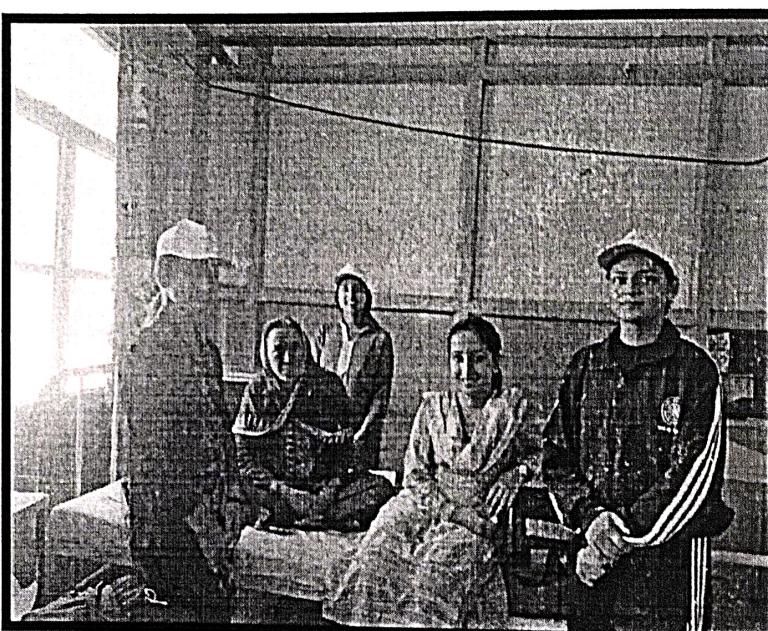

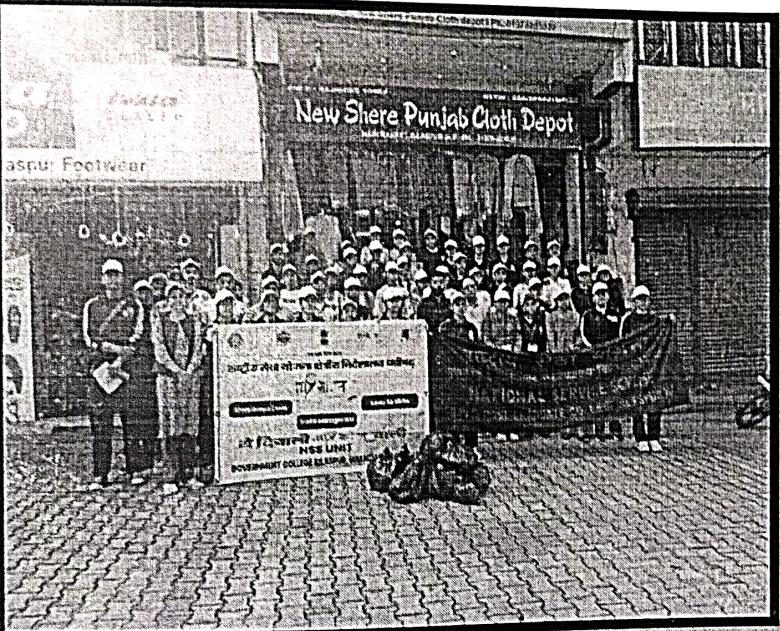

and health of water bodies but also promote awareness about environmental conservation and sustainable practices. Students of our college, along with student wings such as NSS and NCC, actively and continuously participated in water-source cleanliness drives. On 26/04/2025, students carried out cleaning activities at water sources located in Oyal village, Bilaspur, and Kohu village, Nalagarh. Their collective efforts contributed significantly to preserving these essential community resources and improving the surrounding environment.

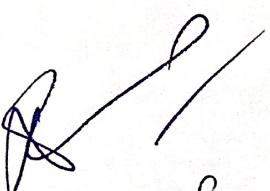

Participation in water-source clean-up drives helps students develop teamwork, leadership qualities, and a strong sense of responsibility. It also strengthens their understanding of sustainability and highlights the long-term importance of conserving natural resources. By engaging in such initiatives, college students become active contributors to community well-being and inspire others to adopt eco-friendly habits. Ultimately, these efforts support both environmental protection and the overall welfare of society.

5.3.3 Traffic Control Management

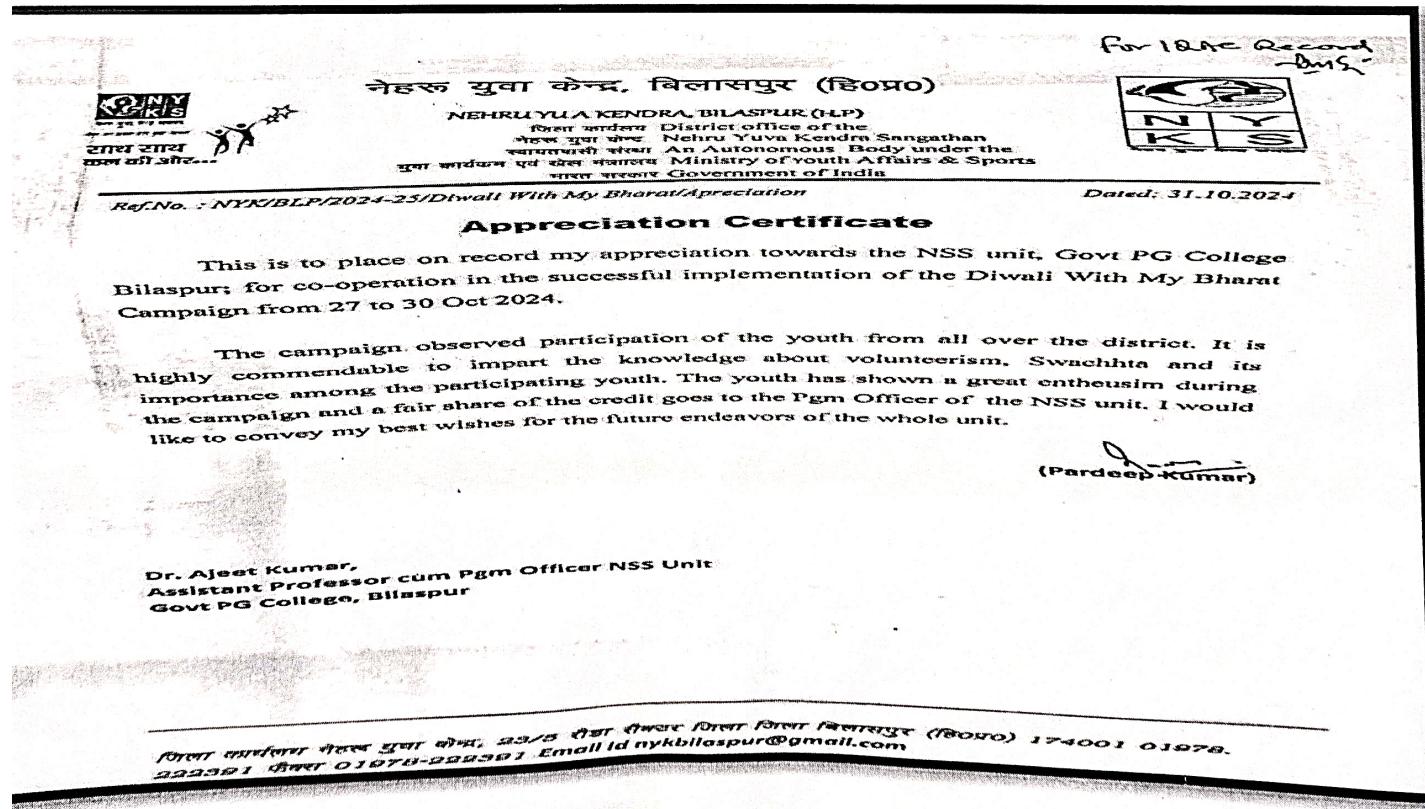

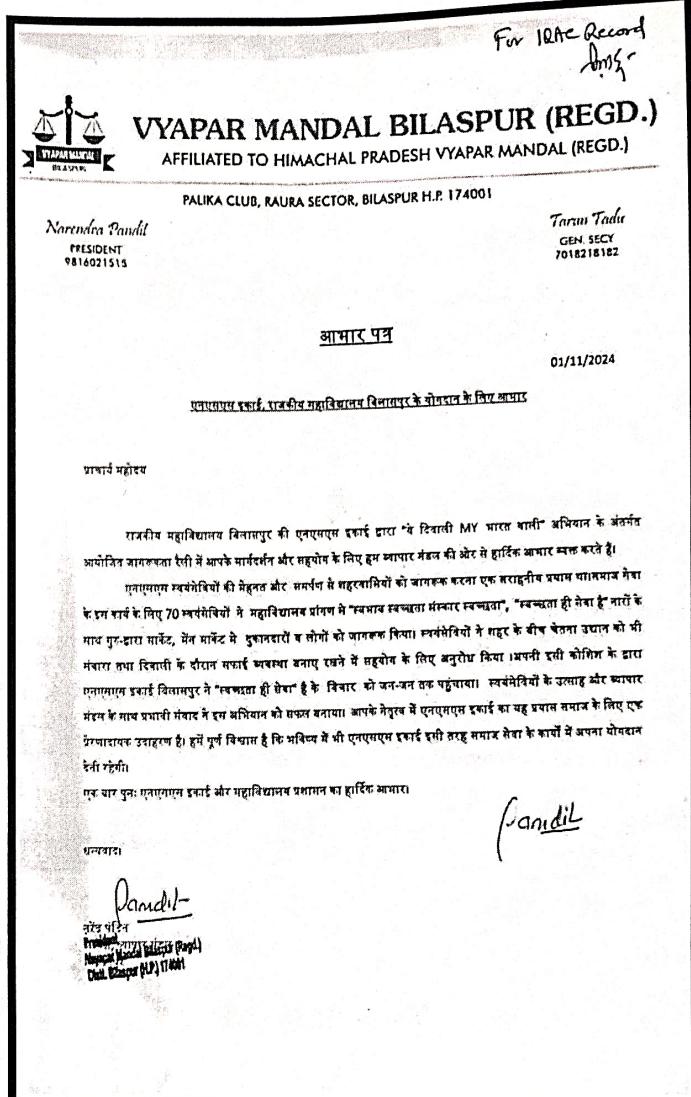

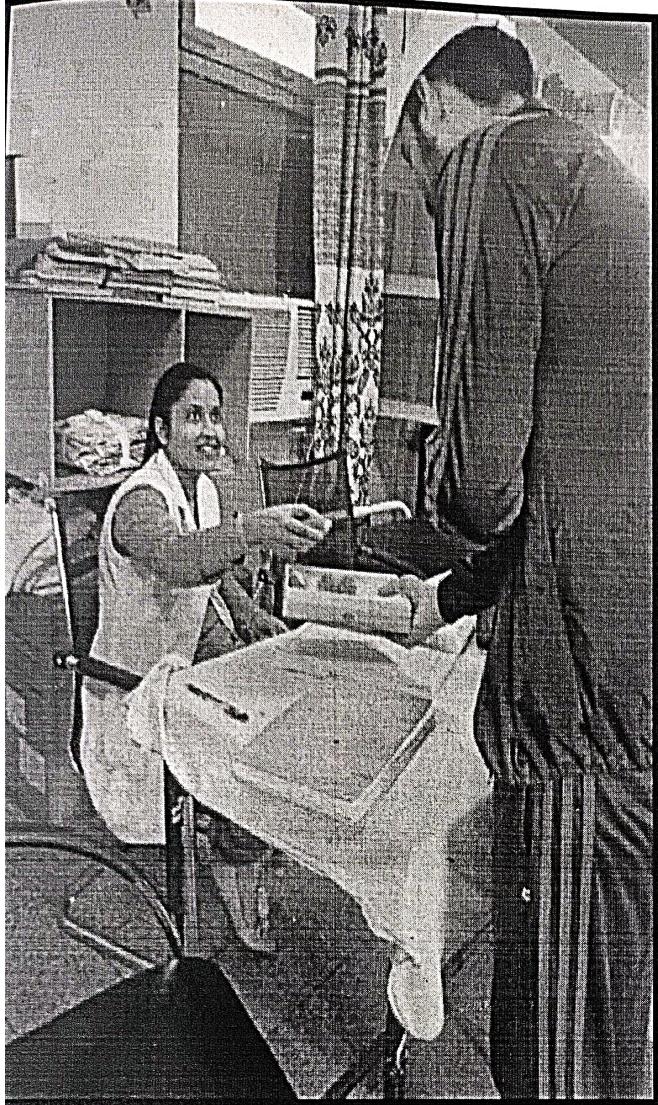

The college students actively participated in community service programmes aimed at promoting civic responsibility and social awareness. One significant activity undertaken as part of these programmes was assisting the Traffic Police in traffic control and management. This initiative provided students with valuable practical exposure to the challenges of urban traffic regulation and highlighted the importance of road discipline and public safety. From 21.10.2024 to 19.11.2024, Government College students worked alongside traffic police personnel to support traffic management activities, especially during peak hours. Through this experience, students gained firsthand knowledge of road safety rules, crowd management techniques, and the critical role of adherence to traffic regulations. Their active presence also helped in creating awareness among commuters and pedestrians about responsible road behaviour.

This activity not only supported traffic police in maintaining smooth traffic flow but also enabled students to develop essential skills such as teamwork, effective communication, and a strong sense of social duty. Engaging college students in traffic management duties thus serves as an effective blend of experiential learning and community service, contributing towards the development of safer roads and more responsible citizens.
